

Dear Roamless team,

I'm excited to apply for the Product Manager role at Roamless. The opportunity immediately stood out to me because it brings together the kind of product challenges I enjoy most: building consumer-facing digital products, working closely with engineering and design, using data and experimentation to make decisions, and scaling products across markets.

Over the past 6+ years, I've owned digital products end-to-end across B2C and B2B environments. At Ironhack, I managed products across 11+ international markets, owning roadmap, discovery, user research, experimentation and delivery while working closely with engineering and design. I used product and operational data to drive decisions, and improved operational efficiency enough to reduce costs by 30%. More recently at Button School, I've worked on early-stage products, including AI-focused offerings, taking them from pilots through iteration and market expansion.

I'm particularly drawn to Roamless because you're tackling a genuinely frustrating problem with a product that has global relevance. The combination of connectivity, travel, technology and rapid international growth makes this a particularly exciting product environment.

I'd love the opportunity to bring my experience in product ownership, experimentation and international scaling to the team and help shape both the existing web experience and the new product you're building from scratch.

Warmly, SD.

Dear Archlet team,

I'm applying for the Product Manager role because the combination of complex B2B workflows, customer-driven product development and AI-enabled automation strongly matches my experience and interests.

I have 6+ years of product management experience across B2B and B2C products. At Ironhack, I progressed from Product Owner to Senior Product Manager, working across 11+ markets and partnering closely with engineering, design, operations and commercial teams. My work included simplifying complex workflows and improving products based on customer feedback and data, contributing to a 30% reduction in operational costs and a 30% reduction in B2B complaints and rework.

More recently, at Button School, I've worked on AI-enabled products, using AI-assisted prototyping and experimentation to validate ideas and accelerate product development.

I'm particularly interested in Archlet because of the opportunity to work closely with procurement teams on high-value problems while applying strong product fundamentals to AI and automation.

I'm based in Barcelona and work comfortably in international, English-speaking teams. I would welcome the opportunity to discuss the role.

Best regards,
Sofía Dalponte

Hi Bending Spoons team,

What attracts me to Bending Spoons is the opportunity to work across different products and problems, and to have a real impact on each of them. I find it much more interesting to keep learning, understand a new product and its users, identify where the biggest opportunities are, and then move quickly from insight to action than to work on the same problem for years.

My background is in UX and Product, with 6+ years owning digital products across B2C and B2B environments. I enjoy getting deep into how a product works, using data and user feedback to challenge assumptions, and working closely with design and engineering to test and improve things quickly. More recently, I've also become increasingly hands-on with AI-assisted prototyping and automation.

The idea of doing that alongside highly capable people, across different products and businesses, sounds like an environment where I could learn a lot while contributing meaningfully.

Best,
Sofia

Dear Masakhane Team,

I am applying to this role because I believe the future of AI will be defined by who gets to build it and in which languages.

Technology is not neutral. It reflects the structures, biases, and priorities of those who create it. Today, too many communities are excluded not only from using AI, but from shaping it. Masakhane's work stands out to me because it challenges that imbalance directly: building language technologies that are rooted in community, representation, and local ownership.

Throughout my career, I have worked in international education environments where access, language, and representation directly impacted outcomes. I have seen how easily programs can fail when they are not designed with context in mind—and how powerful they can become when they are shaped by the people they serve. This has led me to prioritize inclusive design practices: creating feedback systems that elevate underrepresented voices, supporting diverse educator communities, and continuously adapting programs to different cultural and linguistic realities.

As a Latin American professional, I am also conscious of the risks of externally driven innovation. I bring a strong awareness of the responsibility that comes with working across regions and communities different from my own. For me, this means actively questioning assumptions, grounding decisions in evidence, and contributing in ways that support (rather than override) local expertise and leadership.

I am particularly motivated by the intersection of language and AI. Language is not only a tool for communication; it is a carrier of culture, identity, and knowledge. Ensuring that African languages are represented in AI systems is not just a technical challenge, but a matter of equity and cultural preservation.

I would be excited to contribute to Masakhane by bringing a structured program management approach, combined with a strong commitment to inclusive, community-driven innovation. I am eager to keep learning, to listen, and to support work that makes AI more representative of the world it serves.

Thank you for your work and for your consideration.

Warm regards,
Sofia Dalponte

Dear Stripe Team,

What attracts me to Stripe is the scale and complexity of the problems being solved.

Throughout my career, I've been drawn to products that operate across multiple markets, involve diverse stakeholders, and require balancing user needs, business objectives and technical constraints. At Ironhack, I worked on products serving users across 11 international markets, where success depended on understanding different user behaviors, operational realities and growth opportunities while maintaining a coherent product experience.

While my background is not in payments infrastructure, many of the challenges that motivate me are present in this role: navigating complexity, making data-informed decisions, understanding customer needs deeply, and turning large ambiguous problems into clear, executable product strategies. I enjoy going deep into systems, understanding how they work, identifying constraints, and collaborating across disciplines to deliver meaningful outcomes.

My experience combines product management, UX design, experimentation and data analysis. I am comfortable working hands-on with SQL, AI-assisted workflows, prototyping and user research, and I enjoy partnering closely with engineering teams to translate business and customer problems into practical solutions.

The Local Processor Acquiring team is particularly exciting because it sits at the intersection of product, technology, international expansion and customer impact. The opportunity to help businesses access new markets through elegant, scalable infrastructure is exactly the type of challenge I find energizing.

Thank you for your consideration. I would welcome the opportunity to discuss how my experience and approach to product leadership could contribute to Stripe's mission.

Sofia Dalponte

Hi Telit Cinterion team,

What interests me about this role is the product challenge behind NExT Core: taking a technically complex B2B platform and making it scalable, commercially viable and easier for customers and partners to use.

My background is in product, UX and technology, with 6+ years owning digital products across B2B and B2C environments and across 11+ international markets. At Ironhack, I worked closely with engineering, design, operations, commercial teams and customers to turn complex requirements into repeatable product solutions. I helped build a B2B product engine based on structured discovery, reusable product components and clearer processes, while also driving operational improvements that reduced costs by 30%.

I'm particularly comfortable in products where there is significant complexity behind the scenes: understanding different stakeholder needs, deciding what should be standardised, translating requirements into product direction and creating the structure needed to scale.

I don't come from the cellular IoT or telecom industry, so I would have a domain learning curve around technologies such as 3GPP, eSIM and cellular core networks. What I bring is strong product fundamentals, technical curiosity, customer proximity and experience turning complex B2B problems into scalable products across international environments.

Best,
Sofia

Hi Statuspal team,

I'm excited by the opportunity because it sits right at the intersection where I enjoy working most: product, design, and getting things shipped.

Over the last eight years I've worked across product teams, startups, and educational technology businesses, leading products from discovery through delivery. My path into product wasn't purely through product management—I was trained in UX/UI, worked closely with design from the beginning of my career, and spent years making trade-offs between user needs, business goals, technical constraints, and speed.

What resonates with me about a small team environment is the focus on finding “just enough.” Just enough research to gain confidence. Just enough data to identify a pattern. Just enough testing to validate an idea before moving forward. Those conversations and trade-offs have been part of my day-to-day work for years, and they're often where the most important product decisions happen.

Alongside product leadership, I've become increasingly hands-on with AI tools, automation, and rapid prototyping. I enjoy turning ideas into something tangible quickly, learning from real usage, and iterating from there. Combined with my background in UX and data analysis, this allows me to contribute beyond traditional product management responsibilities when needed.

One of the things I value most is being close to the impact of the work. The idea of contributing directly to a product, learning from customers, and seeing improvements reach users quickly is genuinely motivating to me.

I'd love the opportunity to contribute to Statuspal and help continue building a product that makes life easier for the teams who rely on it.

Thank you for your time and consideration.

Sofia Dalponte

Dear Guesty Hiring Team,

I'm excited to apply for the Staff Product Manager, AI position. What attracts me most about Guesty it's that you're treating AI as a new way of building products and organizations. I believe we're at the beginning of a shift where product managers spend less time coordinating work and more time designing systems, validating decisions, and solving meaningful customer problems. That's exactly the kind of environment I want to help build.

Over the past 6+years, I've led digital products across international B2B and B2C markets, owning product discovery, experimentation, roadmap definition, and cross-functional execution. At Ironhack, I managed products operating across 11+ markets, partnering with engineering, design, operations, and business teams to improve customer experiences while driving measurable business outcomes.

More recently, I've intentionally focused my work around AI. Beyond using AI daily as part of my product workflow, I've been building prototypes, experimenting with LLM-based solutions, and exploring agentic workflows to better understand where AI genuinely creates value—and where it doesn't. What excites me is not the technology itself, but its ability to eliminate busywork so teams can spend more time making thoughtful product decisions and creating better experiences for customers.

One aspect of this role especially resonates with me: helping product teams themselves become AI-native. I enjoy creating processes, tools, and frameworks that improve how teams discover problems, make decisions, and ship products. I naturally gravitate toward identifying friction and building practical solutions rather than waiting for someone else to define them.

Alongside my product work, I help lead partnerships and community initiatives at RBL Barcelona, an international community radio project. Working with diverse stakeholders has strengthened my ability to build alignment across different perspectives—a skill that has proven just as valuable in product organizations as it has in community building.

Guesty is tackling complex problems at global scale while embracing AI as a fundamental product capability. I'd be excited to contribute both my product experience and my curiosity as AI continues reshaping how software (and product teams) operate. Thank you for your time and consideration. I look forward to the opportunity to speak with you.

Sofia Dalponte

Dear Typeform team,

I've always admired Typeform because it approaches software differently. It doesn't just help people collect information, it makes creating and completing experiences feel human. **That focus on craft, simplicity, and thoughtful design is rare, and it's exactly the kind of product culture I want to be part of.**

Over the last six years, I've led products from discovery through delivery across international markets, owning roadmaps, defining product strategy, running experiments, and working closely with engineering and design to turn ambiguous problems into products people actually use. At Ironhack, I helped scale digital products across 11 markets while improving both customer experience and operational efficiency. More recently, at Button School, I've been building AI-first learning products, rapidly iterating with users and exploring how AI can make creation faster without losing quality.

While I haven't worked on a design platform like Figma or Canva, I have spent years building products whose success depends on empowering people to create. Whether designing learning experiences, improving authoring workflows, or introducing AI into the creation process, I've learned that the best creation tools disappear into the background and let people focus on their ideas.

What excites me most about this role is the opportunity to shape the place where every Typeform begins. **The builder isn't just another feature, it's the foundation of your product.** Helping evolve it into an experience that is both more powerful and more intuitive, especially as AI becomes part of the creative process, is exactly the kind of challenge I enjoy.

Beyond my experience, **I bring curiosity, a strong sense of ownership, and genuine enthusiasm for building products that people love using.** I care deeply about understanding users, collaborating across disciplines, and sweating the details that turn functional software into memorable experiences.

I'd love the opportunity to contribute to the future of creation at Typeform.

Thank you for your time and consideration.

Sofia Dalponte

Hola equipo de Symmetry,

Cuando leí la oferta pensé: “este es el tipo de empresa en la que quiero trabajar”, me motivan los entornos donde el producto se construye a partir de datos, experimentación y una obsesión constante por entender al usuario. Donde cada decisión tiene un impacto medible y el ritmo de ejecución importa tanto como la calidad de las ideas.

Durante los últimos 6 años he trabajado construyendo productos digitales en entornos B2B y B2C, liderando discovery, definición de roadmap, experimentación y ejecución junto a equipos de ingeniería, diseño y negocio. En Ironhack gestioné productos presentes en más de 11 mercados internacionales, lanzando nuevas iniciativas, optimizando la experiencia de usuario y colaborando con múltiples áreas para mejorar métricas de negocio y de producto.

Creo que la IA está cambiando el paradigma del desarrollo de producto: nos permite dedicar menos tiempo a tareas repetitivas y más tiempo a entender problemas, validar hipótesis y tomar mejores decisiones. Hoy utilizo herramientas como Claude, ChatGPT y otras soluciones de IA de forma diaria para investigar, sintetizar información, prototipar ideas y acelerar mi trabajo como Product Manager.

Me siento especialmente cómoda trabajando con autonomía, definiendo prioridades en entornos ambiguos y tomando decisiones apoyadas en datos. Disfruto diseñando experimentos, aprendiendo rápido y ajustando el rumbo cuando la evidencia lo requiere. Creo que esa mentalidad encaja muy bien con una empresa que pone el foco en activación, retención y crecimiento continuo.

Además de mi experiencia profesional, colaboro impulsando alianzas y comunidad en RBL Barcelona, un proyecto internacional donde coordinar personas con perfiles muy distintos me ha enseñado la importancia de construir consenso sin perder velocidad.

Me ilusiona la posibilidad de aportar mi experiencia, mi curiosidad y mis ganas de construir a una empresa que está creciendo tan rápido como Symmetry.

Muchas gracias por vuestro tiempo.

Un saludo,

Sofía Dalponte

Dear Constructor Tech Hiring Team,

I'm excited to apply for this position, what drew me to Constructor is the opportunity to work on products where AI delivers tangible value at scale. I'm particularly motivated by the challenge of turning complex technology into experiences that solve real customer problems and create measurable business impact.

Over the past six years, I've led digital products across international B2B and B2C markets, owning product discovery, roadmap definition, experimentation, and cross-functional delivery. At Ironhack, I managed products operating across 11+ markets, collaborating with engineering, design, operations, and commercial teams to improve user experiences while driving business outcomes. I've led initiatives that required aligning diverse stakeholders, making decisions with incomplete information, and balancing customer needs with company goals.

More recently, AI has become a core part of how I approach product management. I use it daily to accelerate research, synthesize customer insights, prototype ideas, and improve the quality and speed of product decisions. What excites me most isn't AI itself, but how it enables teams to spend less time on repetitive work and more time understanding users and building products that matter.

I enjoy working in environments where curiosity, experimentation, and continuous learning are valued. Constructor's mission of helping businesses deliver more relevant and personalized digital experiences through AI is the kind of meaningful product challenge I'd be excited to contribute to.

I'd love the opportunity to bring my product experience, collaborative approach, and passion for building customer-centric products to your team.

Thank you for your time and consideration.

Sofía Dalponte

Dear PandaDoc Hiring Team,

I'm excited to apply for the Product Manager position at PandaDoc, I want the opportunity to build products that become part of people's everyday work. I enjoy solving problems where great product decisions can simplify complex workflows and help customers focus on what really matters instead of administrative tasks.

Over the past 6 years, I've built digital products across international B2B and B2C markets, leading product discovery, roadmap definition, experimentation, and cross-functional delivery. At Ironhack, I managed products used across 11+ markets, partnering closely with engineering, design, operations, and commercial teams to improve customer experiences while delivering measurable business outcomes.

My approach to product management is rooted in curiosity and evidence. I enjoy talking to users, understanding the motivations behind their behavior, validating assumptions through experiments, and using data to guide decisions. More recently, AI has become an essential part of my workflow, helping me accelerate research, prototype ideas, synthesize insights, and spend more time on the strategic aspects of product management.

What excites me about PandaDoc is your commitment to creating products that are both powerful and intuitive. As AI continues to reshape how people work, I believe the greatest opportunities lie in designing experiences that reduce friction without adding complexity. That's the kind of product challenge I find most motivating.

I'd be excited to bring my product experience, collaborative mindset, and passion for building customer-centric products to PandaDoc and contribute to the next stage of your growth.

Thank you for your time and consideration.

Sofía Dalponte

Dear Hedepy Team,

I am excited to apply for the Product Owner position at Hedepy.

Throughout my career, I have been driven by a simple belief: meaningful products are built by deeply understanding people and continuously learning from their needs. Over the past six years, I have led product discovery, roadmap definition, experimentation, and product delivery across international markets, helping scale digital products used by diverse audiences and teams.

At Ironhack, I owned the end-to-end lifecycle of educational products operating across 11+ markets. I worked closely with users, internal stakeholders, and cross-functional teams to identify opportunities, prioritize initiatives, and improve outcomes through research, experimentation, and data-driven decision making. This work included launching new products, optimizing user journeys, and improving operational efficiency while balancing business goals and customer value.

What attracts me most to Hedepy is the opportunity to work on a product with meaningful human impact. Mental wellbeing is an area where technology can genuinely improve people's lives when designed thoughtfully and responsibly. The combination of mission, product complexity, and growth stage makes this role particularly exciting.

I would welcome the opportunity to contribute my experience in product discovery, stakeholder management, and product scaling while continuing to learn from a talented team committed to improving access to mental health support.

Thank you for your consideration.

Sofia Dalponte

Dear Hiring Team,

I am excited to apply for this Product role.

Over the past six years, I have built and scaled digital products across international markets, leading product discovery, experimentation, roadmap definition, and cross-functional delivery in both B2B and B2C environments.

At Ironhack, I owned products operating across 11+ markets, working closely with users, business stakeholders, design, engineering, and operations teams to improve customer experiences and business outcomes. My work ranged from launching new products and testing growth opportunities to optimizing operational processes and improving retention and engagement metrics through continuous iteration.

What excites me about this opportunity is the chance to contribute to a product that serves real customer needs at scale. I enjoy working in environments where customer understanding, data-informed decisions, and collaboration across teams are essential to success.

Alongside my professional experience, I currently help lead partnerships and community initiatives at RBL Barcelona, an international community radio project. This experience has strengthened my ability to build alignment across diverse stakeholders and create long-term value through collaboration.

I would be excited to bring this combination of product leadership, operational thinking, and customer focus to your team.

Thank you for your consideration.

Sofia Dalponte

Dear Holded Team,

I am excited to apply for the Product Specialist Partners position at Holded.

Throughout my career, I have worked at the intersection of product, operations, and stakeholder management, helping build solutions that create long-term value for both users and organizations. Over the past six years, I have led product initiatives across international markets, collaborating with cross-functional teams, aligning diverse stakeholders, and turning complex needs into scalable solutions.

What particularly attracts me to this role is its focus on partnerships and ecosystem growth. Beyond my product experience, I currently lead partnerships at RBL Barcelona, an international community radio project where we collaborate with cultural institutions, collectives, festivals, and local initiatives. This experience has reinforced my belief that the most successful partnerships are built on shared goals, trust, and long-term collaboration rather than short-term transactions.

I enjoy connecting people, identifying mutual opportunities, and creating frameworks that enable partners to succeed. Whether working with customers, internal teams, or external collaborators, I bring a relationship-driven mindset combined with strong organizational and product thinking skills.

Holded's commitment to helping businesses grow through a connected ecosystem strongly resonates with me, and I would be excited to contribute by supporting partners, improving collaboration processes, and helping expand the value delivered to Holded customers.

Thank you for your consideration. I would welcome the opportunity to discuss how my product, partnership, and community-building experience can contribute to Holded's continued growth.

Kind regards,

Sofia Dalponte

Dear Novakid Team,

I'm excited to apply for the Senior Product Manager – AI & Game-Based Learning role.

My background combines pedagogy, classroom teaching, and EdTech product experience, which is why Novakid's vision strongly resonates with me. Throughout my career, I've been especially passionate about designing learning experiences that are not only educationally effective, but also deeply engaging and motivating for learners.

I hold a degree in Pedagogy and previously worked as an Art Teacher in Argentina, experiences that gave me a strong understanding of child-centered learning, creativity, and how emotional engagement shapes educational outcomes. Later, transitioning into EdTech allowed me to bring that educational perspective into digital product development.

At Ironhack, I contributed to the design and launch of adult learning experiences for Web Development, UX/UI, Data Analysis and Cybersecurity high-intensity programs. Collaborating across product, design, development and learning designers to create interactive learning journeys with strong engagement and retention outcomes. I particularly enjoyed working on features and experiences that transformed learning into something more exploratory, rewarding for any kind of learner, and outcomes-driven.

What attracts me most about Novakid is your ambition to combine gamification, and language learning into a motivating self-learning environment for children. The opportunity to work on adaptive learning experiences, engagement systems, and AI-supported educational tools for young learners feels closely aligned with both my professional experience and personal interests.

I'm particularly inspired by your focus on creating intuitive experiences for children, integrating game mechanics thoughtfully, and building products that encourage confidence, curiosity, and continuous practice outside live classes. I would love the opportunity to contribute to that mission.

Thank you for considering my application. I'd be excited to further discuss how my background in pedagogy, EdTech, and learner engagement could contribute to Novakid's product vision.

Warm regards,
Sofia Dalponte

Dear Hiring Team,

I'm excited to apply for the Product Manager role at Glovo.

I've been following Glovo's growth closely for years, and it's one of the few companies in Europe that genuinely feels like it's building at global, category-defining scale. The combination of speed, ambition, and real-world impact on how people access everyday products is exactly the kind of environment I want to build in.

I also have several colleagues working at Glovo, and everything I hear reinforces what's already visible from the outside: a strong culture of ownership, high pace, and constant experimentation. That's where I do my best work.

What draws me most to this role is the chance to work on consumer discovery and recommendations in a high-frequency marketplace. It's one of the most interesting product challenges out there—turning massive, messy supply into simple, personalized decisions for users, while directly driving conversion and retention.

I'm especially excited about the opportunity to shape a product that sits at the center of people's daily lives, in a true B2C environment where product decisions have immediate and measurable impact.

I'd love the opportunity to contribute to Glovo's next stage of growth.

Sincerely,
Sofía Dalponte

Hi Holded team,

I'm excited to apply for the Product Owner role at Holded. Over the last 6+ years, I've worked across B2B and B2C digital products, leading product discovery, experimentation, and cross-functional delivery in international environments.

What especially attracts me to Holded is the opportunity to build products that genuinely improve how businesses operate day to day. Throughout my experience at Ironhack and more recently at Button School, I've worked closely with engineering, design, and operations teams to launch and scale products across multiple markets, always balancing user needs, business impact, and operational efficiency.

I feel particularly aligned with environments where product teams work closely with users, iterate fast, and rely on data-informed decision making. I've led roadmap definition, experimentation initiatives, UX improvements, and AI-enabled product iterations while coordinating diverse stakeholders across distributed teams.

Beyond the experience itself, I bring a strong product mindset: curiosity, ownership, structured prioritization, and a collaborative way of working. I'm also genuinely motivated by SaaS products that help companies become more efficient and scalable — which is why Holded feels like a very natural fit.

I'd love the opportunity to contribute to your team and continue building impactful products together.

Best,
Sofia Dalponte

Dear Hiring Manager,

I'm excited to apply for the Staff Product Manager AI position at Hostaway. With over seven years of experience in product management, UX, and operations, I have a proven track record of building and scaling digital products that balance user experience, business impact, and operational efficiency. Recently, I've focused on AI-enabled products and workflows, exploring how they can enhance product experiences and unlock new value.

At Button School, I led cross-functional teams to deliver impactful e-learning experiences for designers worldwide. I played a key role in shaping business strategy, driving growth, and ensuring our products met both user needs and business objectives. My background in product management and AI product development aligns well with Hostaway's mission to streamline routine work, improve decision-making, and simplify complex tasks across the property management lifecycle.

Hostaway's dedication to creating smarter, faster, and more personalized customer workflows resonates with my passion for bridging business, design, and engineering to ship impactful, scalable solutions. I believe my skills in cross-functional team leadership, strategic influence, and AI product management can help Hostaway continue to innovate and grow.

Thank you for considering my application. I look forward to discussing how my expertise can contribute to Hostaway's success.

Sincerely,

Sofia Dalponte

Dear Hiring Team,

I am excited to apply for the opportunity at Cint.

Throughout the last decade, I have worked at the intersection of product, education and user experience, helping organizations design and scale programs, services and digital experiences that create meaningful outcomes for users. My experience spans product management, operations, community building and learning experience design, with a consistent focus on understanding user needs and turning insights into action.

At organizations such as Ironhack and Button School, I have collaborated with cross-functional teams to improve customer experiences, launch new initiatives, optimize processes and support business growth. Much of my work has involved gathering qualitative and quantitative feedback, identifying opportunities for improvement and aligning stakeholders around solutions that deliver value to both users and the business.

What attracts me most to Cint is the company's mission of helping organizations make better decisions through high-quality insights and measurement. I am particularly inspired by Cint's culture of curiosity, collaboration and innovation, and by the way the company continues to evolve alongside emerging technologies, including AI.

While my background comes from EdTech rather than research technology, I believe my strengths in user understanding, product thinking, stakeholder management and customer-centric problem solving would allow me to contribute quickly and effectively. I am energized by complex challenges, enjoy working in fast-moving environments and thrive when connecting user needs with business objectives.

I would welcome the opportunity to discuss how my experience and perspective could contribute to Cint's continued growth and success.

Thank you for your time and consideration.

Warmly,
Sofia Dalponte

Dear Hiring Team,

Downtown Music immediately stood out to me because it sits at the intersection of two worlds I care deeply about: technology and music.

Professionally, I have spent my career leading product, innovation, and technology initiatives across distributed international teams. My work has focused on product discovery, customer research, rapid prototyping, and validating new opportunities through experimentation and lean testing. I enjoy navigating ambiguity, aligning stakeholders, and turning ideas into products that create real value for users and businesses.

Personally, music has become an increasingly important part of my life. I currently lead partnerships and community initiatives at RBL Barcelona, an international community radio station where I help build collaborations across artists, collectives, and cultural organizations. It is some of the most fulfilling work I do, as it allows me to contribute directly to a creative ecosystem that I care deeply about.

Over the last year, I have also started DJing. After more than twenty years on dance floors as a listener and participant, discovering music from the other side of the booth has given me an entirely new appreciation for the role music plays in bringing people together and shaping how we experience life. It has connected me more closely to artists, communities, and the creative process than I ever expected.

What excites me about Downtown is the opportunity to combine this personal passion with my experience in product innovation and technology. I would love to help build products and services that empower creators, rights holders, and partners while contributing to the continued evolution of the music industry.

Thank you for your consideration. I would welcome the opportunity to discuss how my background and perspective could contribute to Downtown Music.

Best regards,
Sofía

Hi Typeform team,

I'm excited to apply for the Lead Product Manager - Growth role. Typeform has long been one of those products I genuinely admire: thoughtful, human-centered, beautifully executed, and deeply focused on user experience. As someone who cares deeply about product craft, usability, and growth through meaningful experiences, this role feels like a very natural fit.

Over the last 6+ years, I've led and scaled digital products across B2B and B2C environments, owning product discovery, experimentation, onboarding flows, engagement initiatives, and cross-functional delivery across international markets. At Ironhack, I worked on products operating in 11+ markets, leading roadmap prioritization, A/B testing initiatives, UX improvements, and retention-focused iterations. More recently, at Button School, I've been building AI-focused educational products in fast-moving, highly experimental environments.

A big part of my work has lived at the intersection of Product, Growth, Marketing, and Operations: aligning teams around metrics, identifying friction points through data and user feedback, and turning insights into measurable improvements across activation and engagement. I enjoy bringing structure and clarity to ambiguous spaces while keeping teams focused on outcomes and user value.

Beyond the experience itself, I'm especially motivated by companies that care about how products feel; not only how they perform. Typeform's approach to creating conversational, enjoyable experiences at scale is something I deeply respect and would love to contribute to.

Best,
Sofia Dalponte

Hi Zynga team,

I'm excited to apply for the Lead Product Manager role. My background combines 6+ years building and scaling consumer digital products across international markets with a strong focus on experimentation, user behavior, engagement, and cross-functional execution.

At Ironhack, I owned product strategy and delivery for products operating across 11+ markets, leading roadmap definition, A/B testing initiatives, UX improvements, and operational scaling. More recently, at Button School, I've been building AI-focused educational products from the ground up — balancing fast iteration, user feedback, growth, and product-market fit in highly dynamic environments.

What especially attracts me to Zynga is the opportunity to work on products built around emotion, connection, and long-term engagement. I'm deeply interested in how product decisions shape user motivation, retention, and social experiences at scale. I enjoy working closely with design, engineering, analytics, and business teams to turn insights into experiences that feel seamless and compelling for users.

Alongside product strategy and execution, I bring a strong analytical mindset, experience with experimentation frameworks, SQL/data analysis foundations, and a collaborative leadership style focused on clarity, ownership, and measurable outcomes.

I would love the opportunity to contribute to products that reach and entertain millions of players globally.

Best,
Sofia Dalponte

Dear N26 Hiring Team,

I'm applying for the Product Manager (Savings) role because I'm excited by the challenge of building financial products that people genuinely enjoy using and trust in their daily lives.

My background isn't traditional finance, but my experience has consistently centered around digital products, user experience, cross-functional collaboration, and turning complex ideas into intuitive experiences. I've worked in fast-moving environments where balancing user needs, business goals, and execution was essential; and that's the kind of work I enjoy most.

What I think I bring is a strong customer perspective, product intuition, and adaptability. I learn quickly, communicate well across teams, and like working on products that have a real impact on people's behavior and decisions. I'm especially interested in the intersection of fintech, behavioral design, and simple user experiences that make complicated systems feel accessible.

N26 feels like a strong fit because of its product culture, international environment, and focus on building modern financial experiences in a more user-centered way.

Thank you for your consideration. I'd love the opportunity to discuss the role further.

Best,

Sofia Dalponte

Dear Blacklane Hiring Team,

I'm excited to apply for the Senior/Staff Product Manager role because the combination of marketplace dynamics, operational complexity, and customer experience is exactly the kind of environment I enjoy working in.

My background has focused on digital products, UX, strategy, and cross-functional collaboration in fast-paced environments. While I haven't followed a traditional path through mobility or transportation, I've consistently worked on products and initiatives that required balancing user needs, business goals, operational realities, and stakeholder alignment.

What interests me most about Blacklane is the challenge of building systems that feel seamless to users while coordinating complex processes behind the scenes. I'm especially drawn to products where data, behavior, and experience intersect; understanding how people make decisions, identifying friction points, and improving flows in ways that are both practical and scalable.

I'm comfortable working closely with product, engineering, design, operations, and business teams, and I tend to thrive in environments where there's a strong sense of ownership and continuous iteration. Alongside product thinking, I bring a strong sensitivity to UX, communication, and customer trust, which I think are essential in premium service experiences.

Blacklane's international and product-driven culture feels like a strong fit for the way I like to work, and I'd love the opportunity to contribute to the team.

Best,
Sofia Dalponte

Dear SeQura Team,

I am excited to apply for the Senior Product Manager position for the Education Vertical. This opportunity feels like a natural fit. Throughout my career, I have worked at the intersection of education, technology, and business, helping thousands of learners access opportunities that can genuinely change the trajectory of their lives. Contributing to building financial products that make education more accessible feels deeply aligned with my values.

At Ironhack, I owned and scaled educational products across more than 11 international markets, serving learners in different countries, languages, and learning formats. As a Product Manager, I was responsible for the full product lifecycle—from market research, product bets, discovery, and strategy to delivery, operations, and continuous improvement. I led a cross-functional squad, working daily with design and engineering while driving data-informed decision-making and collaborating closely with operations, marketing, and academic teams. My focus was always on understanding learner needs and goals, reducing friction throughout the journey, and balancing user value with sustainable business growth while delivering measurable outcomes.

One of the most valuable lessons from working in education is that choosing to invest in learning is rarely a simple transaction. Behind every enrollment decision there is uncertainty, ambition, financial pressure, and the hope of creating new opportunities. Whether improving acquisition journeys, optimizing retention, or launching new programs, I learned to build products with deep empathy for users navigating important life decisions.

Beyond product execution, I have experience scaling educational offerings internationally, leading initiatives ranging from launching new learning experiences and AI-focused programs to optimizing operational processes and improving revenue and retention outcomes.

What excites me most about SeQura is the opportunity to combine product management with a mission I genuinely care about. I would be thrilled to contribute my experience in education products, international growth, and user-centered product development to help EduQa continue expanding its impact.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and perspective can contribute to SeQura's vision.

Warmly,
Sofia Dalponte

Dear Enginy Team,

I am excited to apply for the Product Manager position at Enginy. What caught my attention about this role is the opportunity to work on a product with clear customer value while having real ownership over its direction and growth. I enjoy working in environments where product, business, and execution come together, and where decisions are driven by customer needs rather than assumptions.

Over the past six years, I have owned products end-to-end, from discovery and strategy through delivery and iteration. At Ironhack, I led educational products across more than 11 international markets, working closely with engineering, design, marketing, operations, and academic teams. This meant balancing long-term product goals with day-to-day execution, validating opportunities, prioritizing initiatives, and making sure we delivered meaningful outcomes for both users and the business.

A big part of my work has been understanding user needs through research, data, and continuous feedback. Whether launching new programs, improving conversion and retention, or optimizing internal processes, I have always enjoyed getting close to the problem, understanding what matters most, and working with teams to find practical solutions.

I am particularly drawn to Enginy's focus on discovery, experimentation, and building quickly. More recently, I have also worked on AI-powered learning experiences and integrated AI tools into workflows, giving me first-hand experience of how these technologies can help teams work more effectively when applied to real customer problems.

Thank you for considering my application. I would love the opportunity to discuss how my experience and approach to product management could contribute to Enginy's next stage of growth.

Warmly,
Sofia Dalponte

Hola equipo de Novicap,

Me gustaría presentar mi candidatura para la posición de Product Manager. Aunque mi experiencia no ha estado centrada en fintech, sí he pasado los últimos seis años construyendo y escalando productos digitales en entornos complejos, trabajando muy de cerca con equipos de tecnología, operaciones y negocio para convertir necesidades reales en soluciones útiles y sostenibles.

En Ironhack lideré productos educativos presentes en más de 11 mercados internacionales, siendo responsable de todo el ciclo de producto: investigación, discovery, definición de estrategia, lanzamiento, mejora continua y análisis de resultados. Gran parte de mi trabajo consistía en entender las necesidades de usuarios y stakeholders, identificar oportunidades de negocio, priorizar iniciativas y traducir problemas complejos en planes de trabajo claros para equipos multidisciplinarios.

Más allá del desarrollo de nuevas funcionalidades, he trabajado extensamente optimizando procesos y operaciones para hacer productos más eficientes, escalables y sostenibles. Es precisamente esta combinación de producto, negocio y operaciones la que más me atrae de Novicap y de vuestro enfoque para ayudar a las pymes a gestionar mejor su capital circulante.

Me identifico especialmente con vuestra forma de entender el producto: tomar decisiones basadas en datos, colaborar estrechamente con diferentes áreas de la empresa y construir soluciones que generen valor a largo plazo, más allá de los resultados inmediatos. También me atrae la oportunidad de trabajar en un entorno donde el producto tiene un impacto directo tanto en los clientes como en el crecimiento del negocio.

Creo que mi experiencia liderando discovery, validando oportunidades, alineando equipos y escalando productos en distintos mercados me permitiría aportar una perspectiva valiosa al equipo desde el primer día.

Muchas gracias por vuestro tiempo y consideración. Estaré encantada de conversar sobre cómo podría contribuir al crecimiento de Novicap.

Un saludo,
Sofía Dalponte

Dear Skyscanner Hiring Team,

I'm excited to apply for the Principal Product Manager, AI Platform role at Skyscanner.

As a long-time Skyscanner user, I've always admired the product for making complex travel decisions feel simple and intuitive at scale. It's rare to find a product that becomes part of people's habits for years, and even rarer to find one that continues evolving thoughtfully.

My background sits at the intersection of product strategy, systems thinking, AI-enabled workflows, and cross-functional leadership. I've worked across complex digital products and platforms, leading initiatives that improve collaboration, streamline decision-making, and create better experiences for both users and internal teams. I'm particularly drawn to platform and developer-facing problems — translating technical complexity into scalable, usable systems that accelerate execution without sacrificing quality or trust.

Over the past few years, I've been deeply immersed in AI tooling, experimentation workflows, and operationalizing emerging technologies within product environments. I enjoy working closely with engineering and data teams, navigating ambiguity, and building structures that allow innovation to scale sustainably.

What excites me most about this opportunity is the chance to help shape how AI products are built internally — not only what gets shipped, but how teams are empowered to build better, faster, and more intelligently.

I'd love the opportunity to bring my product leadership, strategic thinking, and strong curiosity around AI-native product development to Skyscanner.

Best regards,
Sofia Dalponte

Dear Pearson Hiring Team,

I'm excited to apply for the Lead Specialist, Product Management role at Pearson. With a background in UX, product management, and education technology, I believe my experience aligns strongly with both the role and Pearson's mission of improving learning outcomes through innovation.

At Ironhack, I led cross-functional squads across several educational products, including the launch and growth of the Data Science and Cybersecurity bootcamps. A key part of my work involved improving assessments and certifications, partnering with industry stakeholders, and designing evaluation frameworks that were meaningful for both learners and instructors.

I also helped translate broader business goals into product solutions. Following the pandemic, our team redesigned the classroom delivery model to improve operational efficiency while maintaining educational quality, contributing to a reduction in costs of around 30%.

More recently, as Product Lead at Button School, I helped launch two new products that contributed directly to revenue growth and helped the company adapt to rapid changes in education and technology.

Throughout my career, I've worked closely with UX, engineering, instructors, and commercial teams to prioritize roadmaps, write user stories, deliver measurable outcomes, and stay closely connected to customer needs. I'm comfortable balancing strategy with hands-on execution, and I value collaborative, learning-focused team cultures.

I'm especially excited by Pearson's focus on innovation and the future of learning, including the opportunities AI presents to create more effective and accessible educational experiences.

Thank you for your consideration. I would welcome the opportunity to discuss how my background could contribute to your team.

Best regards,

Sofia Dalponte

Benvolguts/des,

Em dirigeixo a vosaltres per presentar la meva candidatura com a co-docent en l'àmbit de disseny i gestió d'e-learning a la UOC.

Soc professional de l'educació amb més de deu anys d'experiència en entorns universitaris i digitals, combinant la docència amb la gestió de programes educatius. Al llarg de la meva trajectòria, he treballat en el disseny d'experiències d'aprenentatge, la coordinació d'equips i la creació de continguts, sempre amb un enfocament centrat en l'estudiant i en la qualitat pedagògica.

He col·laborat amb equips internacionals i multidisciplinaris, fet que m'ha permès desenvolupar una mirada flexible i estratègica sobre l'educació en línia. M'interessa especialment com el disseny, la metodologia i la tecnologia poden contribuir a generar experiències d'aprenentatge més accessibles, rellevants i participatives.

Conec el model educatiu de la UOC i valoro especialment la seva aposta per la innovació pedagògica i la flexibilitat, així com la seva capacitat de generar impacte en trajectòries professionals diverses. He tingut molt bones referències de la institució i de professionals que hi col·laboren, fet que reforça el meu interès per formar-ne part.

Com a docent, m'apassiona acompanyar els estudiants en el seu procés d'aprenentatge, fomentant el pensament crític, la creativitat i l'aplicació pràctica dels coneixements. Crec que el meu perfil pot aportar valor tant en la dinamització de l'aula virtual com en la construcció d'una experiència d'aprenentatge significativa.

Adjunto el meu CV i quedo a la vostra disposició per ampliar qualsevol informació.

Moltes gràcies per la vostra atenció,

Sofía Dalponte

Equipo de Arauna,

Me interesó vuestra búsqueda porque reúne tres ámbitos en los que llevo años trabajando: diseño, gestión de proyectos y cultura.

Mi trabajo siempre ha consistido en coordinar personas, procesos y recursos para convertir ideas en proyectos bien ejecutados. Disfruto especialmente creando estructuras que permitan a los equipos creativos trabajar con claridad, autonomía y foco.

Mi formación es en Diseño Industrial, Producto, Museología y Museografía, una base que me dio una manera de entender los espacios, las experiencias y los procesos de diseño. Con el tiempo amplíé ese perfil hacia la gestión de proyectos, acompañando equipos multidisciplinares en entornos donde estrategia, creatividad y ejecución van de la mano.

En Ironhack Barcelona participé en una etapa de fuerte crecimiento, coordinando programas, equipos y proyectos transversales mientras la organización escalaba. En paralelo, dirijo Radio Banda Larga Barcelona y cofundé una agencia musical, desde donde gestiono colaboraciones, producción y proyectos culturales internacionales.

Creo que puedo aportar una combinación poco habitual entre gestión, diseño y cultura, además de una forma de trabajar organizada, resolutiva y cercana.

Muchas gracias por vuestro tiempo. Espero que tengamos la oportunidad de conocernos.

Un saludo,
Sofía Dalponte

Dear Hiring Team,

I am excited to apply for the Senior Manager, EU Partnerships & Fundraising position at GSMA because it brings together many of the areas that have motivated my work over the past decade: building meaningful partnerships, creating collaborative initiatives across Europe, and helping ambitious projects secure the support they need to grow.

Throughout my career I have worked at the intersection of technology, culture and social impact, leading partnerships and strategic initiatives across international environments. As Partnership Lead and Board Member at Radio Banda Larga, I have developed collaborations with cultural institutions, festivals and community organizations while contributing to the Cosmos Funding Team, which recently secured a two-year European grant. This experience has given me first-hand exposure to partnership building, funding strategy and collaborative project development within the European ecosystem.

Alongside my professional work, I have spent the past three years volunteering in international organizations focused on social impact. I have participated in numerous European training programmes and networking initiatives, and I currently contribute to the Partnerships Team of Fuori Festival in Spoleto, Italy. These experiences have strengthened my understanding of how lasting collaborations are built across cultures, sectors and institutions.

While much of my professional background has been in product strategy and innovation, I have always been drawn to the work that happens before products and programmes can exist: bringing people together, aligning diverse stakeholders, identifying opportunities and turning ideas into sustainable initiatives. Those are the challenges I find most rewarding.

The opportunity to join GSMA is particularly exciting because it offers the chance to contribute to projects with a broader European impact. I would be thrilled to relocate to Brussels and dedicate my experience to initiatives that operate at a larger scale, applying the partnership, strategy and fundraising skills I have developed throughout my career to help build meaningful collaborations across the region.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and enthusiasm for European collaboration can contribute to GSMA's Strategic Development team.

Kind regards,
Sofia Dalponte
